Aquariums – fresh water

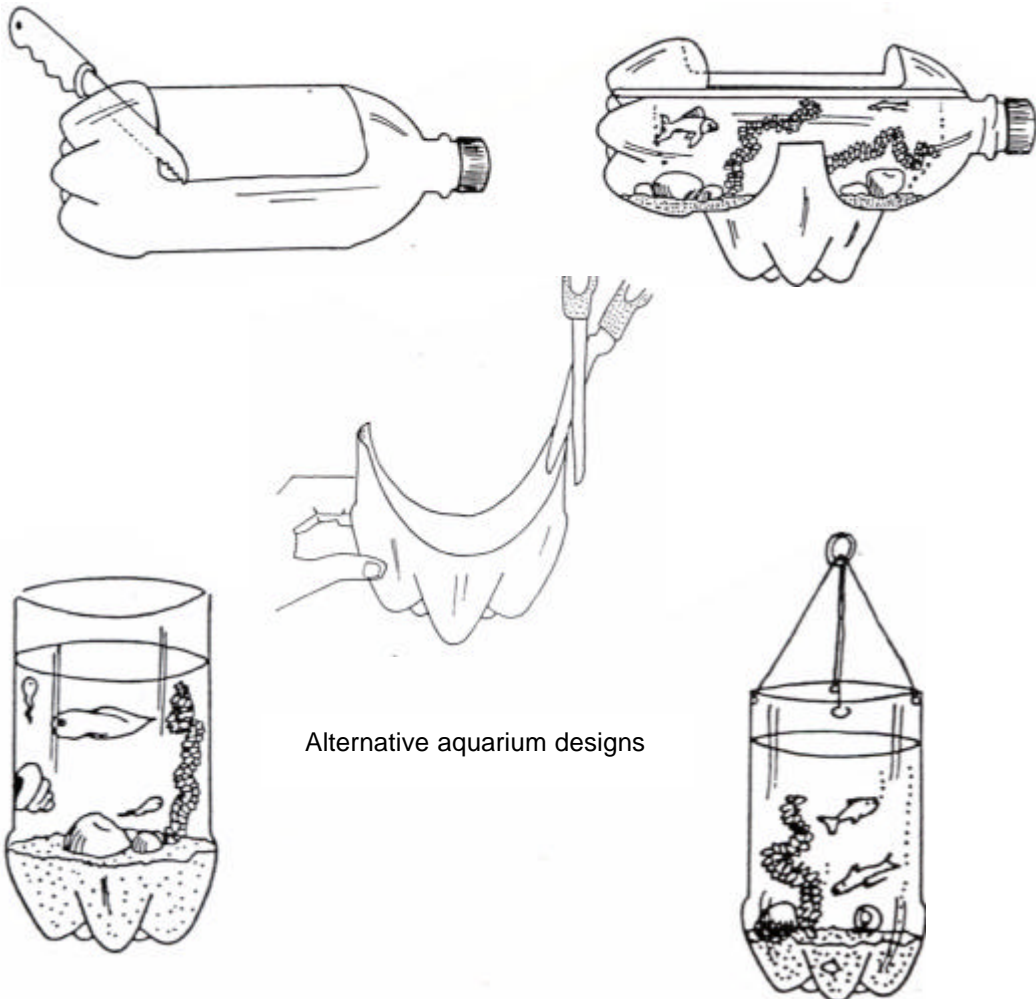

(From Pet Projects, produced by the Australian and New Zealand soft drink industries and their suppliers of PET. Consulting editor Eric Jackson. The information is reproduced by permission of the College of Education, Auckland, New Zealand.)

You will need:

A PET bottle, water weed, sand, pebbles, fish, water, knife, scissors

Method:

1. With a marking pen draw lines along the sides and across the base and top of the PET bottle. Carefully cut across the base line with a serrated bread knife or sharp pointed blade. Cut along other lines with scissors.
2. Fill to just below the cut out section with water and place inside it elements such as water weed, sand and pebbles, plus the fish.
3. A support for the aquarium may be made from the bottom of another bottle. Cut a circle of paper the same diameter as the bottle, hold it against each side of the bottle near the bottom, draw around its outside with a marking pen and cut out the shape to fit the aquarium.
